Performance Notes

When a note is marked tenuto and staccato in the synth part, play the note portamento. The tone of the synth should be breathy, similar to a tribal wind instrument like the pan flute or ocarina. However, the notes should decay like a piano, so that after each note is played it gently fades away, unlike the sharper cutoff of a wind instrument. When a decrescendo is marked on a single note in the synth part, the decay of the tone should be increased for that note, and the note allowed to ring for the notated length before dying away. This may not be possible on all synthesizers, but if it can be done this is the desired effect.

Some of the vibraphone pedaling may seem unusual. The pedaling is so marked to create, in certain passages, a somewhat cacophonic blending of the pitches, where you can hear the individual notes when the are struck, but they morph together eventually, creating a sound of almost indefinite pitch. If the pedaling must be changed to better accommodate performace space, the player should keep these esthetic considerations in mind.

The koto part has been notated as if it were a concert harp. This has been done for accessibility purposes, as many musicians are unfamiliar with traditional Japanese koto notation.

This piece is a part of the soundtrack to the video game "No Hero," an RPG that is in development at this time. Within the game, the material enclosed in the repeat signs would loop continuously. If performed by live musicians, the markings for the loop can be ignored, but if the performers want to emulate how the piece would be heard in "No Hero," then they might play one or two repeats.

To Peer Through the Cracks
